

PROJECT:

ROSSOS

ROSSOS

BEWARE:

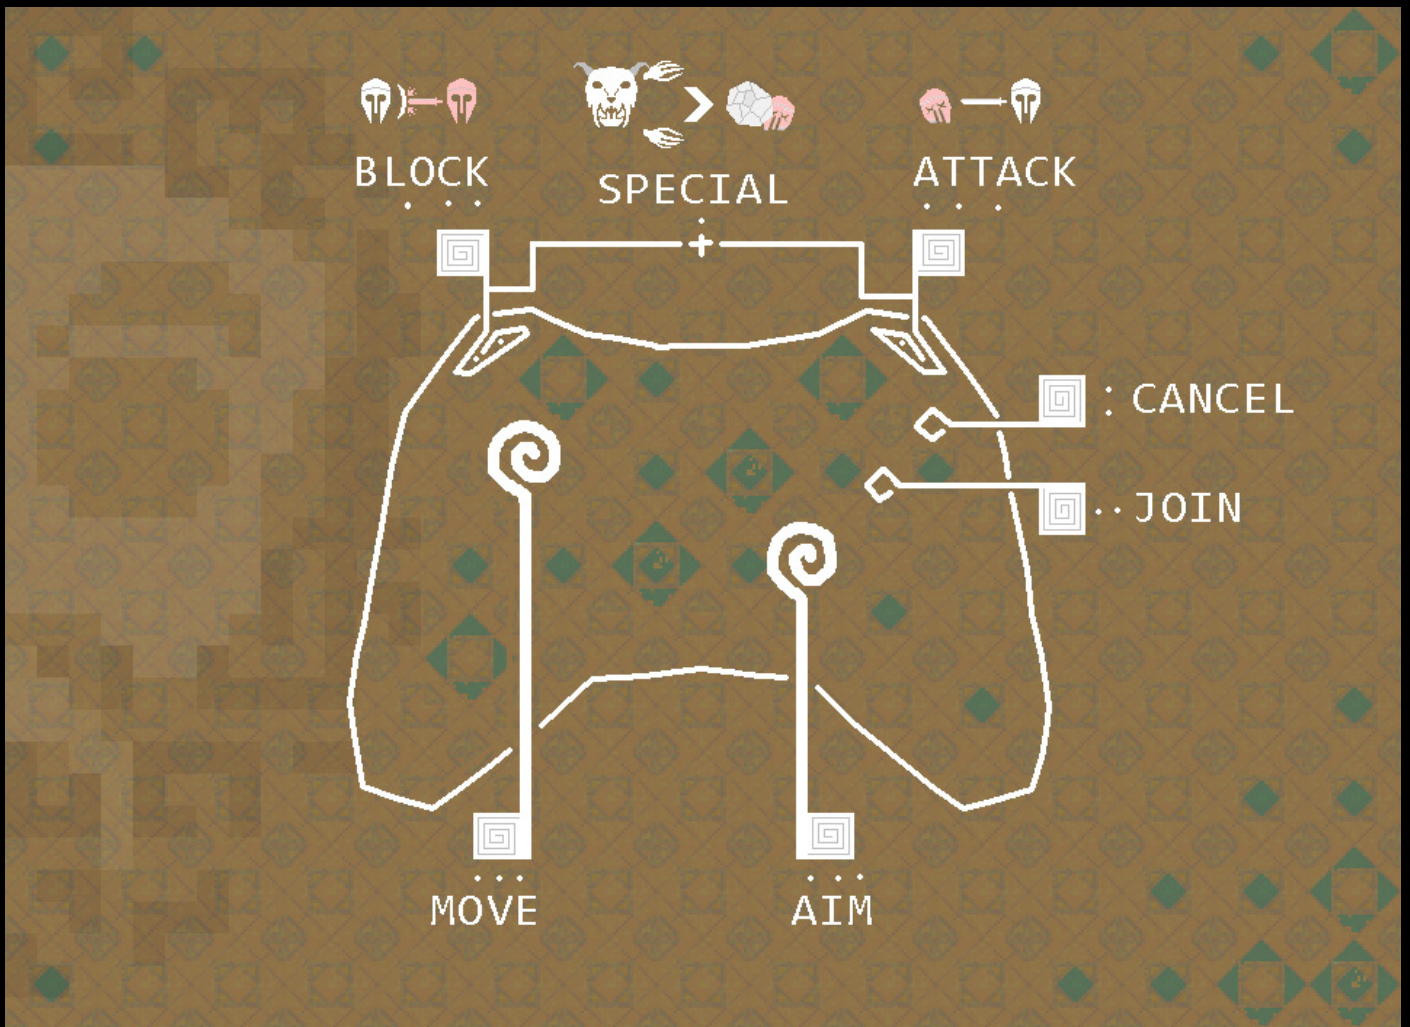

KNOSSOS needs one controller per player
(2-8 players supported)

This game was designed to be used at exhibitions and for happy gatherings with friends or family. Each player can bring their own controller, plug it in and play!

Use the keyboard to manage the game:

- ESC: open menu
 - ESC: (again) to exit the game
 - R: to restart and go back to the lobby
 - ENTER: to close the menu and continue

No matter the controller, each input device should work the same. If the triggers don't respond use the shoulder buttons to attack and defend.

There are 3 main gamemodes in the Lobby.

To start one all colored players must stand within one of the circles.

A countdown will appear and after 3 seconds the game will start with the chosen gamemode.

To use the 4th and kind of secret game mode, let the players split up in teams and wait in the left and right circle.

This will start the Football mode, where a ball needs to be carried or thrown over the enemies team score line.

In the Lobby nobody can hurt each other, but choose colors and armor.

Thank you for playing and:

HAVE FUN!
